

Sample RDMP: Interviews, recordings and transcriptions

Project name *	Sample RDMP project	
Project key dates *	Project start date	01/03/2026
	Project end date	01/03/2029
Project Code *	rdmp_interview	
Chief Investigator *	Prof J. Smith (<i>NOTE - if you are a HDR student, this will be your supervisor</i>)	
Faculty/Affiliation *	Faculty of Arts & Social Sciences	
IRMA ID/s	This is optional, and can be filled in once IRMA ID for a grant has been created	
University ethics identifier	This is optional and can be filled in once a MyResearchEthics ID has been created	
Project Description *	This is a sample RDMP. This is an investigation about the correct way to write a RDMP. We will be conducting interviews, making recordings and transcriptions, and surveying experts in the research data management field.	
Data Classification *	Highly Protected (<i>NOTE - recordings are difficult to properly de-identified, and the raw recordings will be stored on RDS, there is a risk that sensitive ideas/beliefs may be disclosed during the interview process, this may not reflect your research project</i>)	
Where will you store your data during project? *	Data collection, analysis, and storage Consent and survey data will be collected on the University's REDCap service; this data will be stored on REDCap during the project. Interviews will be recorded using the University's Zoom, which will also provide automated transcriptions. These recordings and transcriptions will be moved to the Research Data Store (RDS) for storage. Working copies of the transcriptions, as well as exports of survey data will be stored on the University's OneDrive service. (<i>NOTE - these are not the only research platforms available, please see this platform comparison table for more options</i>) Nvivo will be used to analyse transcripts and extended responses from the survey. Statistical software will be used in the analysis of the data extracted from transcripts and surveys. (<i>NOTE - this is an example and might differ depending on your project</i>). Confidentiality and Privacy The confidentiality and privacy of participants of this study will be protected by: • Reporting group data • Only using de-identified quotes where applicable • De-identifying transcripts and survey results as soon as possible, and only using these de-identified transcripts/survey results for analysis	

	• Never storing identifiable data outside of REDCap and RDS. (<i>NOTE - this is an example and might differ depending on your project</i>).
Where will your data be stored after project completion, for the retention period? *	Upon the completion of the research project, all data will be moved to and stored on the RDS for the duration of the minimum retention period. Provisions for future use We are expecting to publish a series of journal articles, conference papers and/or presentations using the results of this study. Additionally, de-identified datasets may be placed into a repository for reference and possible reuse. No identifiable or re-identifiable data will ever be made available through publication, presentation or archiving in a repository. (<i>note this is an example, and may not reflect your research project</i>)
How long does your data need to be retained? *	5 years (<i>NOTE - this is an example, and may not reflect your research project</i>)
Any special considerations for data management in this project?	None (<i>NOTE - this is an example, and may not reflect your research project</i>)
Are you storing any data from a third-party provider? *	No
Does your project include data about First Nations peoples?	No (<i>NOTE - this is an example, and may not reflect your research project</i>)
